

**UNIVERSITY OF ARIZONA
FIRE ALARM POLICY for BUILDING OCCUPANTS
HEALTH SCIENCES INNOVATION BLDG (HSIB) – BUILDING #216**

In the event of a fire or fire alarm, The University of Arizona requires all occupants of university buildings to NOTIFY appropriate groups of the fire, and EVACUATE the building.

NOTIFICATION PROCEDURE

If you discover a fire, or if you smell or see smoke:

- Activate the building's fire alarm by pulling a manual fire alarm station. These devices are located at all stairwell doors and exits from the building.
- Follow the evacuation procedures outlined below.

EVACUATION PROCEDURE

If you hear the fire alarm sirens or see the fire alarm strobes flashing:

- Evacuate the floor immediately via closest exit or stairs. **DO NOT USE THE ELEVATORS.** If you are working in a laboratory, as quickly as possible, shut down any lab procedures involving heated reactions before you leave. As you leave your work area, close all doors, including any that have been propped open.
- **THE HEALTH SCIENCES INNOVATION BLDG (HSIB) IS EVACUATED ON A FLOOR-BY-FLOOR BASIS.**
 - ◆ In a typical scenario, fire alarms will chime on the fire floor and the floors immediately above and below it.
 - ◆ Occupants should evacuate to the next lowest floor level (2 floors). If this level is in alarm, continue to the ground floor and exit the building.
 - ◆ If you are in the basement, go to ground level and leave the building.
 - ◆ If you are on the ground level, leave the building.
- Move away from the building so you are not between it and where the fire department will respond. All building occupants that exit the building must congregate in one of the evacuation points outlined below:
 - Evacuation Point #1** – Warren Ave. Mall (grassy area between Drachman Hall and MRB).
 - Evacuation Point #2** – Parking lot 2012, west of HSIB
 - Evacuation Points for Floor-by-Floor Evacuation** – in corridors, near the stairs through which you evacuated.
- Report any details of the fire to the University of Arizona Police Department (621-8273) after evacuating. State that you are calling about the **HEALTH SCIENCES INNOVATION BUILDING #216.**
- Remain on the lower floor or outside the building, at the designated evacuation points, until UAPD personnel gives the "ALL CLEAR". **ONLY PEOPLE LOCATED AT THE DESIGNATED EVACUATION POINTS WILL BE NOTIFIED WHEN THE BUILDING or FLOOR MAY BE RE-OCCUPIED.** If you evacuate to another location, you may not receive the "ALL CLEAR" notice.

It is very important that you **NEVER ENTER A BUILDING OR FLOOR IF YOU HEAR THE FIRE ALARM SIREN OR SEE THE FIRE ALARM STROBES FLASHING.** A fire or other emergency could be in progress and you may be putting yourself in danger.

It is even more important that you **NEVER RE-ENTER A BUILDING OR FLOOR YOU HAVE EVACUATED UNTIL YOU HAVE HEARD THE "ALL CLEAR".** Both UAPD and Tucson Fire

Department will silence the fire alarm sirens when they arrive at a building so they can communicate over their radios. Just because you may hear the fire alarm siren turn off doesn't mean the building can be re-entered. Wait at the designated evacuation point for notice from UAPD that you can go back into the building.

UNIVERSITY OF ARIZONA
EVACUATION POLICY FOR THE MOBILITY IMPAIRED
HEALTH SCIENCES INNOVATION BUILDING (HSIB) - BUILDING #216

Before a fire alarm happens, supervisors should specifically make sure that any mobility impaired employee is informed of the closest safe refuge area locations and evacuation procedures in the event of an emergency. All other staff members should also be informed of the evacuation procedure for mobility impaired persons.

- ❑ If a mobility-impaired person is able to exit the building without use of the elevator (i.e. the person is on the ground level of the building) then they should exit the building and proceed to one of the evacuation areas.
- ❑ If a mobility-impaired person is located on an upper floor or in the basement, a co-worker or supervisor should escort the mobility-impaired person to the nearest enclosed stairwell. **DO NOT ATTEMPT TO CARRY ANYONE UP OR DOWN THE STAIRS!**
- ❑ Instruct the mobility-impaired person to remain in the stairwell. Enclosed stairwells are safe refuge areas for people who cannot evacuate because they have a higher fire resistant construction than the surrounding building and a separate ventilation system. It is acceptable for a staff member to remain in the stairwell with a mobility impaired person ONLY if there is another staff member evacuating that can report to Tucson Fire Department the location and number of people in a stairwell.
- ❑ Make sure any doors to the stairwell are closed. Open doors will violate the safe "envelope" and might allow smoke, and possibly fire, into the stairwell.
- ❑ Once outside, whoever escorted the mobility impaired person into the stairwell should inform the Tucson Fire Department Command Center that someone is in a stairwell and the location of that particular stairwell. Tucson Fire Department will make the determination to evacuate people in stairwells if necessary.
- ❑ After UAPD has given the "**ALL CLEAR**", the co-worker or supervisor should go immediately to the safe refuge area and escort the mobility impaired person from the stairwell.
